CAUTION

To gain the best performance of the tool, prolong the duty life, make the Warranty valid if necessary, and to avoid hazards of fatal injuries please read and understand this Manual before using the tool.

Keep this manual for future references.

The illustrations in this manual are for reference only. They might be different from the real tool.

ASP-12

Code	• 101509
Description	Vacuum
Voltage	• 127 V~
Frequency	• 60 Hz
Current	• 10 A
Maximum power	• 5 Hp
Rated power	• 1 260 W
Capacity	• 12 gal
Vacuuming pressure	• 12.4 kPa (1.8 PSI)
Outflow pressure	• 13.8 kPa (2 PSI)
Conductors	• 16 AWG x 2C with insulating temperature of 221 °F
Insulating	• Class II
IP Grade	• IPX4

Power Cord Grips used in this product: Type "Y".

Tool Build Quality: Double insulation

Thermal insulation on motor winding: Class F

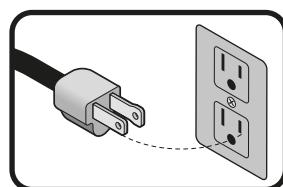

WARNING Avoid the risk of electric shock or severe injury. When the power cable gets damaged it should only be replaced by the manufacturer or at a TRUPER® Authorized Service Center. The build quality of the electric insulation is altered if spills or liquid gets into the tool while in use. Do not expose to rain, liquids and/or dampness.

WARNING Before gaining access to the terminals all power sources should be disconnected.

Power requirements

WARNING Tools with double insulation are equipped with a polarized plug (one prong is wider than the other). This plug will only fit in the right way into a polarized outlet. If the plug cannot be introduced into the outlet, reverse the plug. If it still doesn't fit, call a qualified electrician to install for you a polarized outlet. Do not alter the plug in any way. Double insulation eliminates the need of both a grounded third power cord with three prongs or a grounded power connection.

WARNING When using an extension cable, verify the gauge is enough for the power that your product needs. A lower gauge cable will cause voltage drop in the line, resulting in power loss and overheating. The following table shows the right size to use depending on cable's length and the ampere capability shown in the tool's nameplate. When in doubt use the next higher gauge.

Amperes Capacity	Number of Conductors	Extension gauge from 5.9' to 49.2'		higher than 49.2'
from 0 A and up to 10 A		18 AWG(*)		16 AWG
from 10 A and up to 13 A		16 AWG		14 AWG
from 13 A and up to 15 A	3 (one grounded)	14 AWG		12 AWG
from 15 A and up to 20 A		8 AWG		6 AWG

* It is safe to use only if the extensions have a built-in artifact for over current protection.

AWG = American Wire Gauge. Reference: NMX-J-195-ANCE

WARNING When operating power tools outdoors, use a VOLTECK grounded extension cable labeled "For Outdoors Use". These extensions are especially designed for operating outdoors and reduce the risk of electric shock.

General power tool safety warnings

⚠️ WARNING! Read carefully all safety warnings and instructions listed below. Failure to comply with any of these warnings may result in electric shock, fire and / or severe damage. **Save all warnings and instructions for future references.**

Work area

Keep your work area clean, and well lit.

Cluttered and dark areas may cause accidents.

Never use the tool in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.

Sparks generated by power tools may ignite the flammable material.

Keep children and bystanders at a safe distance while operating the tool.

Distractions may cause loss of control.

Electrical Safety

The tool plug must match the power outlet. Never modify the plug in any way. Do not use any adapter plugs with grounded power tools.

Modified plugs and different power outlets increase the risk of electric shock.

Avoid body contact with grounded surfaces, such as pipes, radiators, electric ranges and refrigerators.

The risk of electric shock increases if your body is grounded.

Do not expose the tool to rain or wet conditions.

Water entering into the tool increases the risk of electric shock.

Do not force the cord. Never use the cord to carry, lift or unplug the tool. Keep the cord away from heat, oil, sharp edges or moving parts.

Damaged or entangled cords increase the risk of electric shock.

When operating a tool outdoors, use an extension cord suitable for outdoor use.

Using an adequate outdoor extension cord reduces the risk of electric shock.

If operating the tool in a damp location cannot be avoided, use a ground fault circuit interrupter (GFCI) protected supply.

Using a GFCI reduces the risk of electric shock.

Personal safety

Stay alert, watch what you are doing and use common sense when operating a tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.

A moment of distraction while operating the tool may result in personal injury.

Use personal protective equipment. Always wear eye protection.

Protective equipment such as safety glasses, anti-dust mask, non-skid shoes, hard hats and hearing protection used in the right conditions significantly reduce personal injury.

Prevent unintentional starting up. Ensure the switch is in the "OFF" position before connecting into the power source and / or battery as well as when carrying the tool.

Transporting power tools with the finger on the switch or connecting power tools with the switch in the "ON" position may cause accidents.

Remove any wrench or vice before turning the power tool on.

Wrenches or vices left attached to rotating parts of the tool may result in personal injury.

Do not overreach. Keep proper footing and balance at all times. This enables a better control on the tool during unexpected situations.

Dress properly. Do not wear loose clothing or jewelry. Keep hair, clothes and gloves away from the moving parts.

Loose clothes or long hair may get caught in moving parts.

If you have dust extraction and collection devices connected onto the tool, inspect their connections and use them correctly.

Using these devices reduce dust-related risks.

Power Tools Use and Care

Do not force the tool. Use the adequate tool for your application.

The correct tool delivers a better and safer job at the rate for which it was designed.

Do not use the tool if the switch is not working properly.

Any power tool that cannot be turned ON or OFF is dangerous and should be repaired before operating.

Disconnect the tool from the power source and / or battery before making any adjustments, changing accessories or storing.

These measures reduce the risk of accidentally starting the tool.

Store tools out of the reach of children. Do not allow persons that are not familiar with the tool or its instructions to operate the tool.

Power tools are dangerous in the hands of untrained users.

Service the tool. Check the mobile parts are not misaligned or stuck. There should not be broken parts or other conditions that may affect its operation. Repair any damage before using the tool.

Most accidents are caused due to poor maintenance to the tools.

Keep the cutting accessories sharp and clean.

Cutting accessories in good working conditions are less likely to bind and are easier to control.

Use the tool, components and accessories in accordance with these instructions and the projected way to use it for the type of tool when in adequate working conditions.

Using the tool for applications different from those it was designed for, could result in a hazardous situation.

Service

Repair the tool in a TRUPER® Authorized Service Center using only identical spare parts.

This will ensure that the safety of the power tool is maintained.

This tool is in compliance with
the Official Mexican Standard
(NOM - Norma Oficial Mexicana).

Safety warnings for vacuum cleaners

Dangerous materials

⚠ WARNING • Do not vacuum or use the vacuum cleaner near flammable liquids, gases or explosive fumes such as gasoline or other types of fuel, lighter fluid, hot liquids, cleaners, oil-based paint, natural gas, hydrogen or explosive dust such as coal dust, magnesium dust, grain dust or gunpowder. Sparks inside the motor can ignite flammable vapors or dust.

⚠ WARNING • Do not vacuum any burning or smoke-producing materials like cigarettes, matches or hot ashes.

⚠ CAUTION • To reduce the risk of damage to health, do not vacuum toxic materials.
• Do not vacuum masonry dust or soot from the chimney, as it is a very fine dust and will not be trapped by the filter, which may cause damage to the motor. When vacuuming fine dust use a special dust filter (sold separately).

Power Cable

- Do not pull or carry the vacuum cleaner by the cord; do not use the cord around sharp edges or corners.
- Keep cord away from hot surfaces.
- Do not unplug the vacuum cleaner by pulling on the cord: To unplug, grasp the plug, not the cord.
- Do not use the vacuum cleaner if the power cord or plug is in bad repair.
- Do not pass the vacuum cleaner over the power cord.
- Do not pick up the plug or vacuum cleaner with wet hands.
- To reduce the risk of injury due to accidental starting, unplug the power cord before changing or cleaning the filter.

Blowing

- Direct the air discharge only in the working areas.
- Do not use the vacuum cleaner as a sprayer.
- Do not blow air at people and animals.
- Keep children away when using as a blower.
- Use safety goggles.

While operating the vacuum cleaner

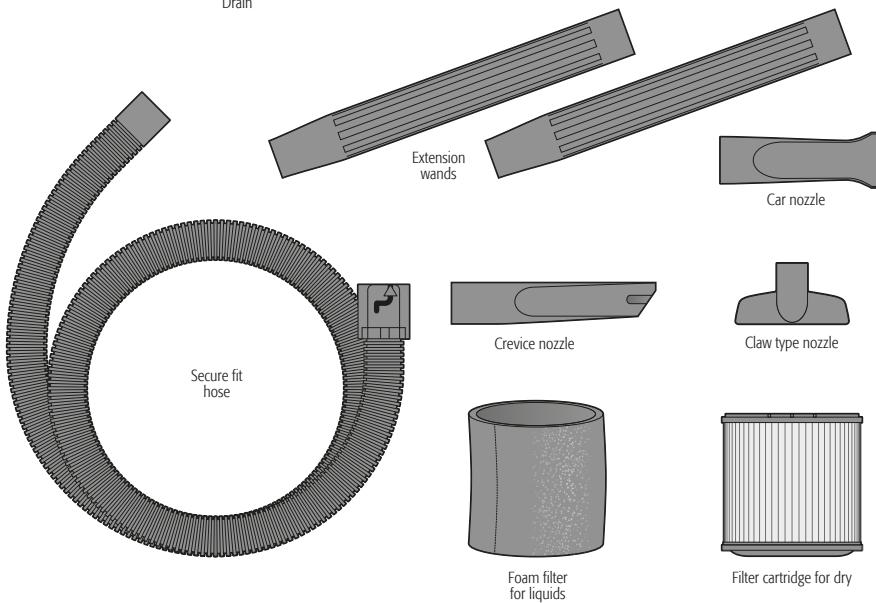

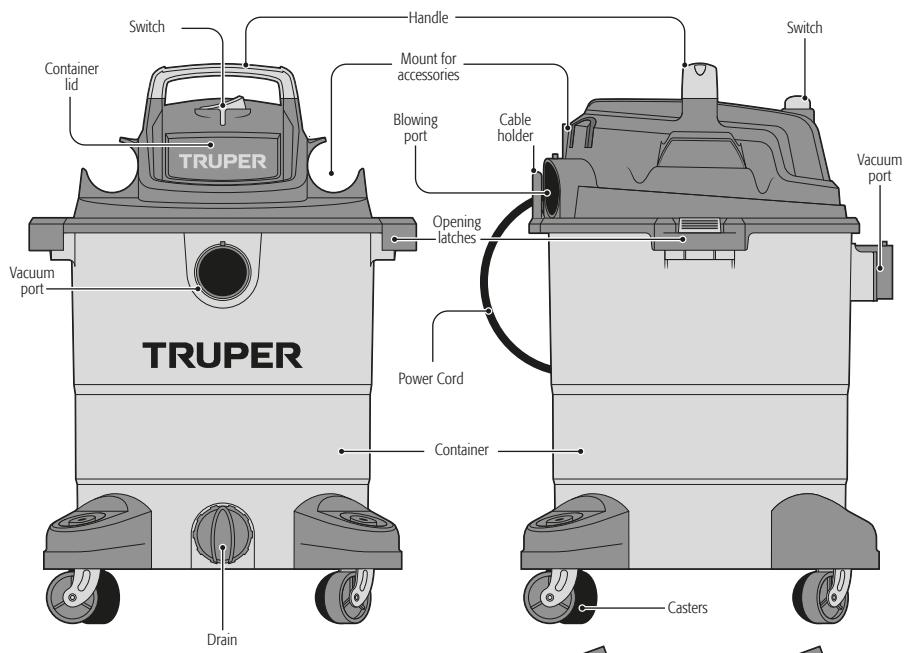

⚠ CAUTION • Keep hair, loose clothing, fingers and any other body parts away from openings and moving parts.

- Do not use or store near hazardous materials.
- Do not leave the vacuum cleaner running unattended.
- Do not leave the vacuum cleaner unattended when it is plugged into the power source.
- Do not install any objects over the ventilation openings.
- Do not operate the vacuum cleaner with blocked vents; keep them free of dust, lint, hair or anything that reduces air flow.
- Do not operate the vacuum cleaner with a broken filter or without the filter installed, except when vacuuming liquids as described in the operation section of this instruction manual.
- To reduce the risk of falls, use extreme caution when cleaning stairs.
- If the vacuum is not working properly: missing parts, dropped or damaged, left outdoors or dropped in water, take it to a **TRUPER**® Authorized Service Center.
- Turn off the vacuum cleaner before unplugging it.
- Unplug from outlet when not in use or before servicing.
- Do not allow to be used as a toy. Particular care should be taken when used by children or when they are nearby.
- Do not expose the vacuum cleaner to rain. Store indoors.
- Use ear protectors when performing services that make noises in excess of 85 dB

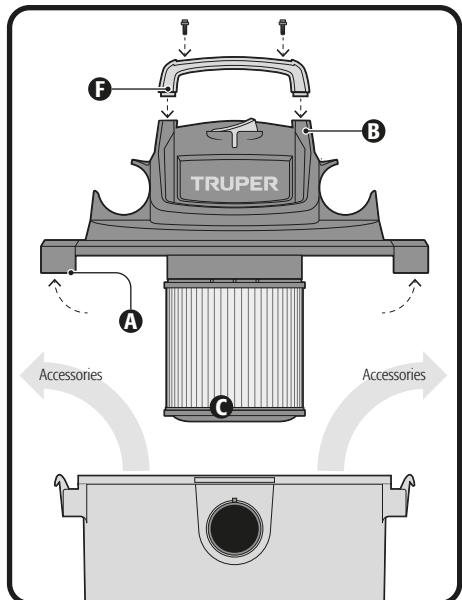

The appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or by untrained persons, unless they are supervised by a person responsible for their safety or have received prior instruction in the use of the appliance.

⚠ CAUTION Children should be supervised to ensure that they do not play with the appliance. Close supervision is necessary when handicapped persons or children use any electrical appliance or are near it.

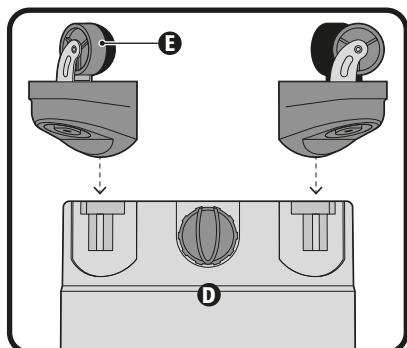

Assembly

 **TRUPER®**

- Pull the latches (**A**) outwards to lift the motor cover (**B**).
- Remove all accessories from inside the container.
- The dry vacuum cloth filter (**C**) is factory installed, remember to use the vacuum cleaner with one of the filters installed otherwise the motor will be damaged and the warranty will be void.
- Turn the container (**D**) upside down and install the four wheels (**E**) in their respective mounts on the base of the container. Rotate the container again to support the wheels on the floor.
- Install the motor cover back on the container until the latches click.
- Insert the handle (**F**) into the container lid, make sure that both mamelons are inserted into the lid boxes. Attach the handle using the 2 screws provided in one of the bags.

- Insert the hose into the vacuum port (**G**).
- If necessary, connect one or more extension tubes to the free end of the hose.
- Choose the appropriate nozzle and connect it to the free end of the hose or if necessary to the extension tube (**H**).

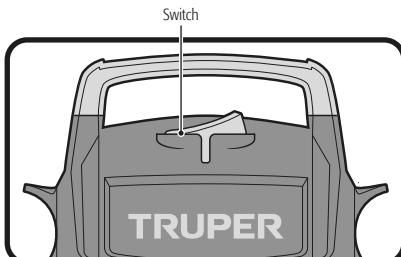

Start Up

Turning ON and OFF

- To turn the vacuum cleaner on, plug the power cord into the electrical outlet.
- Install the switch in the "I" (ON) position.
- To turn the vacuum cleaner off, install the switch in the off position "O" (OFF), and disconnect the power cord from the outlet.

CAUTION • Always verify that the switch is in the off position before connecting the power cord to the outlet.

Dry vacuuming

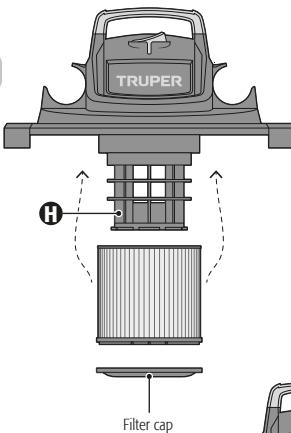

- Open the vacuum as instructed on page 6 to verify that the dry vacuum cloth filter is properly installed.

- If not, hold the motor cover by the handle and install the filter in the filter cage (**H**) as shown. Then install the motor cover in place.

⚠ WARNING • Do not vacuum or work near toxic, flammable or explosive materials as indicated in the safety warnings on page 5.

⚠ CAUTION • For dry vacuuming do not use the foam filter that is for liquid vacuuming.

- When you finish the vacuuming work, empty the container before storing the vacuum cleaner.

Liquid vacuuming

- To install the foam filter for liquid vacuuming, open the vacuum cleaner as indicated on page 6.

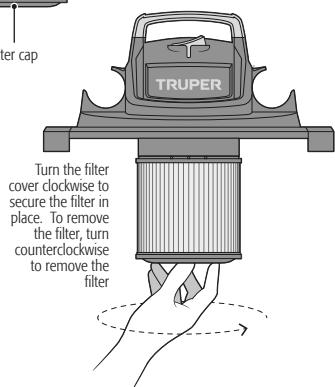

- Turn the engine cover upside down and place the filter in the filter cage (**H¹**) as shown in the image. Then put the engine cover back in place.

⚠ WARNING • Do not vacuum or work near toxic, flammable or explosive materials as indicated in the safety warnings on page 5.

⚠ CAUTION • For liquid vacuuming, do not use the cloth filter for dry vacuuming.

⚠ CAUTION • When vacuuming large quantities of liquids, do not immerse the nozzle completely in the liquid; leave a gap at the tip of the nozzle opening to allow air flow. The machine is designed with a float valve that stops the suction action when the container reaches its maximum capacity. You will notice an increase in motor speed. When this happens, turn the machine off, unplug the power cord from the outlet, open the vacuum and empty the liquid from the container into a receptacle or drain.

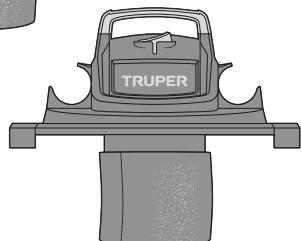

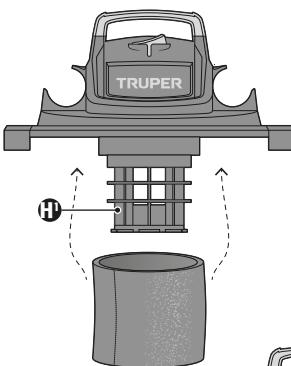

- At the end of the vacuuming job empty the container, clean and dry the inside. Remove the foam filter and install the cloth filter in place before storing the vacuum cleaner.

Blowing

⚠ WARNING • Read, understand and apply the safety warnings on page 5.

- Make sure the container is empty before operating the vacuum cleaner as a blower.
- Remove the hose from the vacuum port and connect it to the blower port.
- Hold the end of the hose firmly.
- Turn on the vacuum cleaner.

Cleaning

- After each use, remove the residue from the container and hose.
- Always keep the ventilation openings of the motor cover free and clean. Blow out regularly with compressed air or clean with a brush.

Service

- Tools should only be serviced at a  **TRUPER®** Authorized Service Center. Service and maintenance by unqualified persons can be dangerous and may result in personal injury and void the product warranty.
- When servicing a vacuum cleaner, ask that only genuine replacement parts be used. Use of unauthorized parts, or failure to properly maintain may create a risk of electrocution or injury.

Carbon brush replacement

- The carbons should be checked periodically, and always be replaced by a  **TRUPER®** Authorized Service Center when they have worn out.
- After they have been replaced, ask to inspect if the new carbons can move freely in the carbon holder and request that the tool be turned on for 5 minutes to match the contact of the carbons and commutator .
- Only genuine  **TRUPER®** replacement carbons, specifically designed with the proper hardness and electrical resistance for each type of motor, should be used. Out of specification carbons may damage the motor.
- When changing carbons, always replace both carbons.

Troubleshooting

Problem

The vacuum cleaner is not working.

Cause

- No power.
- Defective cable.
- The container is full.

Solution

- Check the power supply, cable, circuit switches, fuses.
- Unplug and check the electric cable. If damaged, have it repaired in a  **TRUPER®** Authorized Service Center.
- Empty the container.

Dust comes out of the motor cover.

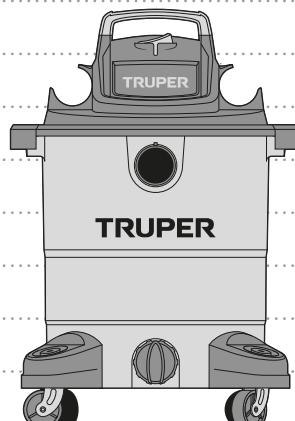

- The filter cartridge is not set or is damaged.

- Set or replace the cartridge filter.

Reduced motor efficiency and vibration / speed.

- There is a blockage in the nozzle, hose or container inlet.
- The filter cartridge is clogged due to the presence of fine dust.

- Check nozzle, hose and container inlet for blockage.
- Remove the filter and clean it or install a new one.

Authorized Service Centers

In the event of any problem contacting a **TRUPER®** Authorized Service Center, please see our webpage www.truper.com to get an updated list, or call our toll-free numbers **800 690-6990** or **800 0187-8737** to get information about the nearest Service Center.

Puesta en marcha

Aspirado en seco

Aspirado de líquidos

Sopla do

- Soplado**

• Al terminar el trabajo de aspirado vacíe el contenido en un recipiente o una alcantarilla.

• Motor: Cuando esto sucede, apague el motor.

• Desconecte el cable del tomacorriente, apague el filtro de aspiradora y vacíe el líquido del contenido en un recipiente o una alcantarilla.

• Limpie y seque el interior. Retire el filtro de aspiradora Y.

• Asegúrese de que el contenido se encuentra vacío antes de seguir las instrucciones de seguridad de la página 5.

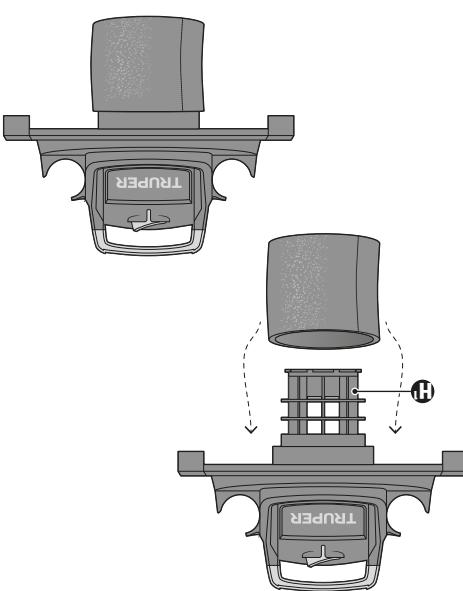

• Asegúrese de que el contenido se encuentra vacío antes de operar la aspiradora como soplado.

• Retire la manijuela del puerto de aspirado y conectela al puerto de soplado. Si lo requiere conecte el los tubos de soplado de aspirado.

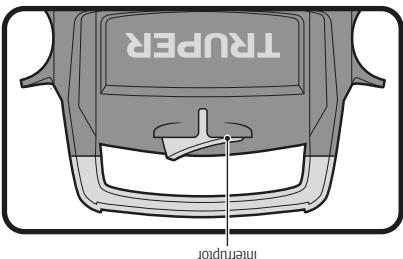

• Sostenga firmemente el extremo de la manguera o del tubo final.

• Encienda la aspiradora.

aspiradora.

- Encienda la aspiradora.
- Quite la manguera del aspirado y conecte el de la manguera o de tubo final.
- Sostenga firmemente el extremo de la manguera o de extensión.
- Quite la manguera del aspirado de la conexión y conectela directamente al tubo de aspirado.
- Asegúrese de que el contenido se encuentre vacío al de operar la aspiradora como aspirado.
- Asegúrese de que el contenido de la pieza 5 se encuentra vacío al de operar la aspiradora como aspirado.
- Una vez que el líquido del contenido en un recipiente o una taza de medida se ha separado de la pieza 5, quite la pieza 5 de la aspiradora y coloque la pieza 5 en su lugar antes de almacenar la aspiradora.
- Al terminar el trabajo de aspirado vacíe el contenido de la pieza 5 en el recipiente de interior. Retire el filtro de espuma y coloque el filtro de tela en su lugar antes de almacenar la aspiradora.
- Una vez que el líquido del contenido de la pieza 5 se ha separado de la pieza 5, quite la pieza 5 de la aspiradora y desconecte el cable de tomacorriente,abra la tapa de la aspiradora y quite la pieza 5 de la aspiradora.

- Siempre verifique que el interruptor se encuentre en la posición de apagado antes de conectar el cable al tomacorriente.

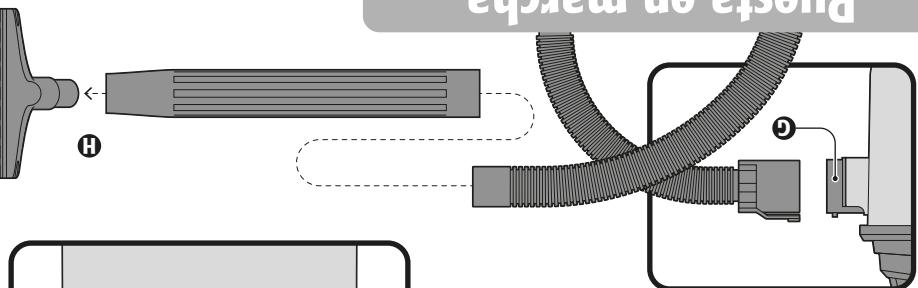

- Para apagar la aspiradora coloque el interruptor en la posición de apagado "OFF".

- Coloque el interruptor en la posición de encendido "ON".

- Para encender la aspiradora conecte el cable al tomacorriente.

Encendido y apagado

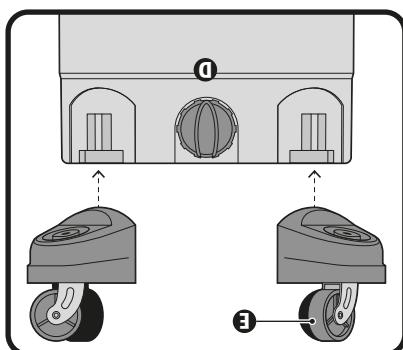

Puesta en marcha

- de la mangüera o de ser el caso en el tubo de extensión (H).

- El boquilla adicional y conectela en el extremo libre en el extremo libre de la mangüera.

- De ser necesario conecte uno o más tubos de extensión (G).

- Inserte la mangüera en el Puerto de aspirado (G).

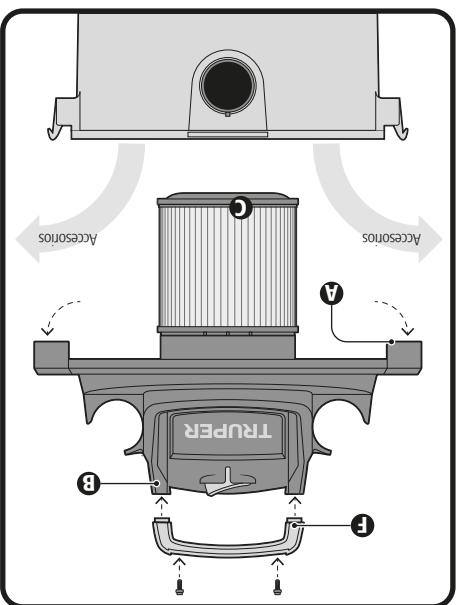

- Una de las bolsas. Fije el mango utilizando los 2 tornillos que vienen en la tapa. File el mango utilizando las 2 clavijas de la parte de arriba que amontonan en la introducción en las clavijas de la parte de abajo.
- Inserte el mango (E) en la tapa del contenedor, asegurando que quede firme hasta que los seguros hagan clic.

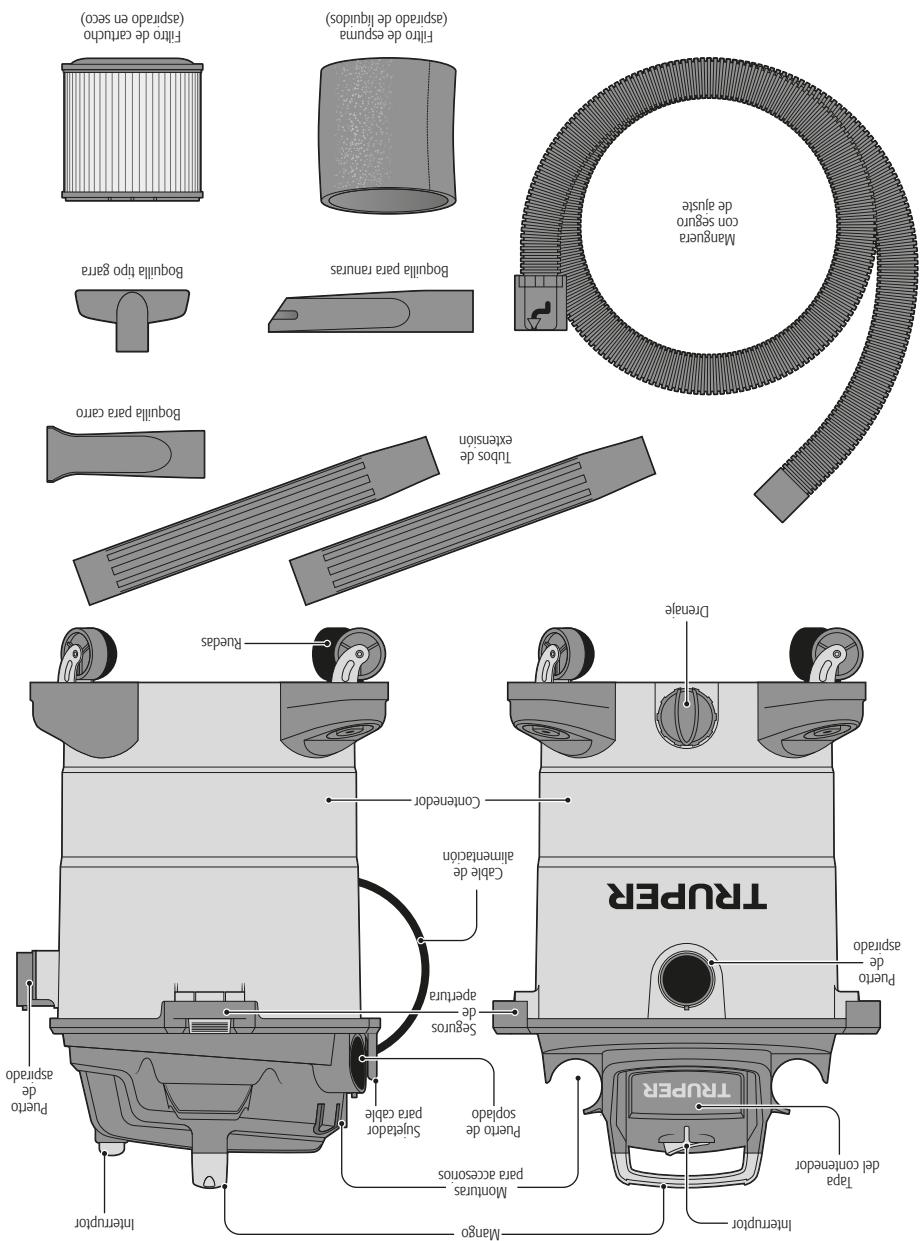

- Coloque de nuevo la cubierta del motor sobre el ruedas en el piso.

- Ponga el contenedor (D) de cabeza y coloque las cuatro ruedas (E) en sus respectivas monturas en la base del contenedor. Gire de nuevo el contenedor para apoyar las ruedas en el piso.

- Retire todos los accesorios del interior del contenedor. Quite la tapa de aspirado en secó (G) y quite las 2 ruedas (E) en sus respectivas monturas en la base del contenedor.

- Tire de los seguros (A) hacia afuera para levantar la cubierta del motor (B).

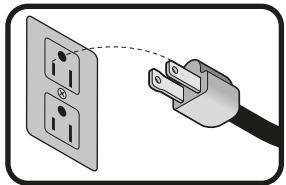

A ADVERTENCIA Al operar el televisor en las horas establecidas en la legislación, tiene que ser consciente de las consecuencias para él y para los demás de su uso excesivo y excesivo de riesgo de salud.

ADVERTENCIAS

Una clavija polarizada (una pata es más ancha que la otra). Esta clavija cabé en cualquier otro enchufe polarizado y solo puede conectarla de una forma. Si la clavija no cabe en el enchufe, vuelve. Si aun así no cabe, pongase en contacto con el fabricante o instale un adaptador polarizado. No olvide en forma alguna. El doble alargamiento eléctrico elimina la necesidad de un cable de conexión entre la clavija y el dispositivo que se conecta.

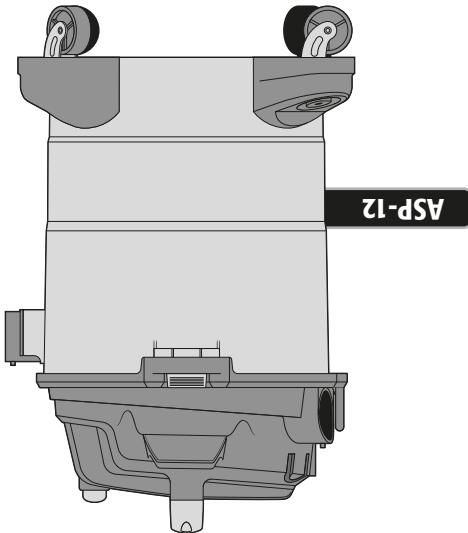

Redes de suministro eléctricos

A.DVERTEMENCIAS Si se celebra de eliminación de la basura, este debe ser remitido a través de la red de servicios autorizada. **CONTRIBUYER**, con el fin de evitar algún riesgo de descripción o accidente considerable. La construcción de sistemas eléctricos de esta manera es alterada por el fabricante o distribuidor. Los desarranamientos de líquidos durante su operación. No lo explique a la lluvia, líquidos y/o humedad.

ADVOCACIA Si el cable de alimentación se daña, este debe ser reemplazado por el fabricante o Centro de Servicio
