

Manual

# Electric hand planer

**1.3 Hp**  
Power

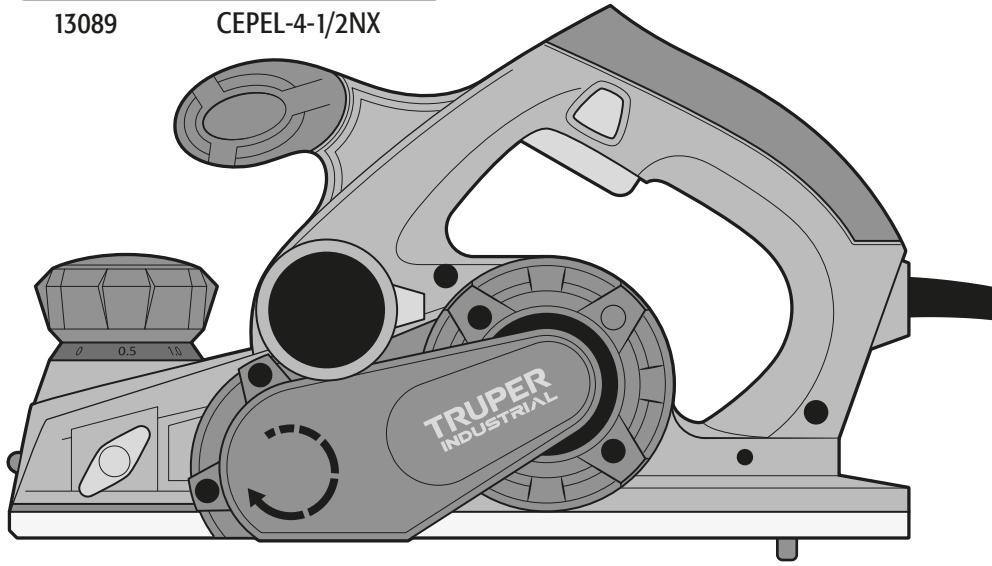

Applies for:

**Code**

**Model**

13089

CEPEL-4-1/2NX

## CEPEL-4-1/2NX

**! CAUTION**

Read the user's manual thoroughly  
before operating this tool.

Technical data .....	<b>3</b>
Power requirements .....	<b>3</b>
 General power tool safety warnings .....	<b>4</b>
 Safety warnings for electric planers .....	<b>5</b>
Parts .....	<b>6</b>
Preparation .....	<b>7</b>
Start up .....	<b>9</b>
Maintenance .....	<b>10</b>
Authorized service centers .....	<b>11</b>
Warranty policy .....	<b>12</b>

**CAUTION**

To gain the best performance of the tool, prolong the duty life, make the Warranty valid if necessary, and to avoid hazards of fatal injuries please read and understand this Manual before using the tool.

Keep this manual for future references.

The illustrations in this manual are for reference only. They might be different from the real tool.

**Use and maintenance recommendations**

-  **RESPECT THE DUTY CYCLES.** 50 minutes of work per 20 minutes of rest. Maximum 6 hours. 
-  Never use the cable for carrying, lifting, or disconnecting the tool.
-  To **EXTEND** the tool's lifespan, clean with compressed air (blow), after each use
-  Perform regular **MAINTENANCE** on your machine (page 10).

## CEPEL-4-1/2NX

Code	•	13089
Description	•	Electric hand planer
Voltage	•	127 V~
Frequency	•	60 Hz
Current	•	7.5 A
Power	•	1.3 Hp
Speed	•	16 000 RPM
Depth levels	•	12 levels, 0.009" each one
Planing	•	Depth: 0" – 0.11"   Width: 4 1/2"
Dust collecting system	•	left - right
Duty cycle	•	50 minutes' work per 20 minutes' idle. Maximum 6 hours per day
Conductors	•	18 AWG x 2C with 221 °F insulating temperature
Insulation	•	Class II
IP Grade	•	IP20

Power cord grips used in this product: Type "Y".

Build quality: Reinforced insulation

Thermal insulation on motor winding: Class A

**WARNING** Avoid the risk of electric shock or severe injury. When the power cable gets damaged it should only be replaced by the manufacturer or at a TRUPER Authorized Service Center.

The build quality of the electric insulation is altered if spills or liquid gets into the tool while in use.

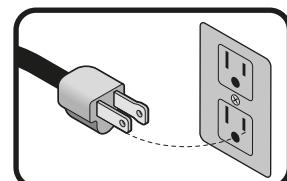

Do not expose to rain, liquids and/or dampness.

**WARNING** Before gaining access to the terminals all power sources should be disconnected.

## Power requirements

**WARNING** Tools with double insulation and reinforced are equipped with a polarized plug (one prong is wider than the other). This plug will only fit in the right way into a polarized outlet. If the plug cannot be introduced into the outlet, reverse the plug. If it still doesn't fit, call a qualified electrician to install for you a polarized outlet. Do not alter the plug in any way. Both insulation types eliminate the need of both a grounded third power cord with three prongs or a grounded power connection.

**WARNING** When using an extension cable, verify the gauge is enough for the power that your product needs. A lower gauge cable will cause voltage drop in the line, resulting in power loss and overheating. The following table shows the right size to use depending on cable's length and the ampere capability shown in the tool's nameplate. When in doubt use the next higher gauge.

Ampere capacity	Number of conductors	Extension gauge From 6 ft to 49 ft	Higher than 49 ft
From 0 A and up to 10 A		18 AWG	16 AWG
From 10 A and up to 13 A		16 AWG	14 AWG
From 13 A and up to 15 A	3 (one grounded)	14 AWG	12 AWG
From 15 A and up to 20 A		8 AWG	6 AWG

\* It is safe to use only if the extensions have a built-in artifact for over current protection.

AWG = American Wire Gauge - Reference NMX - J - 195 - ANCE

**WARNING** When operating power tools outdoors, use a **VOLTECK** grounded extension cable labeled "For Outdoors Use". These extensions are especially designed for operating outdoors and reduce the risk of electric shock.

**General power tool  
safety warnings**

**⚠️ WARNING!** Read carefully all safety warnings and instruction listed below. Failure to comply with any of these warnings may result in electric shock, fire and / or severe damage. **Save all warnings and instructions for future references.**

**Work area**

Keep your work area clean, and well lit.

Cluttered and dark areas may cause accidents.

Never use the tool in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.

Sparks generated by power tools may ignite the flammable material.

Keep children and bystanders at a safe distance while operating the tool.

Distractions may cause loss of control.

**Electrical safety**

The tool plug must match the power outlet. Never modify the plug in any way. Do not use any adapter plugs with grounded power tools.

Modified plugs and different power outlets increase the risk of electric shock.

Avoid body contact with grounded surfaces, such as pipes, radiators, electric ranges and refrigerators.

The risk of electric shock increases if your body is grounded.

Do not expose the tool to rain or wet conditions.

Water entering into the tool increases the risk of electric shock.

Do not force the cord. Never use the cord to carry, lift or unplug the tool. Keep the cord away from heat, oil, sharp edges or moving parts.

Damaged or entangled cords increase the risk of electric shock.

When operating a tool outdoors, use an extension cord suitable for outdoor use.

Using an adequate outdoor extension cord reduces the risk of electric shock.

If operating the tool in a damp location cannot be avoided, use a ground fault circuit interrupter (GFCI) protected supply.

Using a GFCI reduces the risk of electric shock.

**Personal safety**

Stay alert, watch what you are doing and use common sense when operating a tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.

A moment of distraction while operating the tool may result in personal injury.

Use personal protective equipment. Always wear eye protection.

Protective equipment such as safety glasses, anti-dust mask, non-skid shoes, hard hats and hearing protection used in the right conditions significantly reduce personal injury.

Prevent unintentional starting up. Ensure the switch is in the "OFF" position before connecting into the power source and / or battery as well as when carrying the tool.

Transporting power tools with the finger on the switch or connecting power tools with the switch in the "ON" position may cause accidents.

Remove any wrench or vice before turning the power tool on.

Wrenches or vices left attached to rotating parts of the tool may result in personal injury.

Do not overreach. Keep proper footing and balance at all times.

This enables a better control on the tool during unexpected situations.

Dress properly. Do not wear loose clothing or jewelry. Keep hair, clothes and gloves away from the moving parts.

Loose clothes, jewelry or long hair may get caught in moving parts.

If you have dust extraction and recollection devices connected onto the tool, inspect their connections and use them correctly.

Using these devices reduce dust-related risks.

**Power tools use and care**

Do not force the tool. Use the adequate tool for your application.

The correct tool delivers a better and safer job at the rate for which it was designed.

Do not use the tool if the switch is not working properly.

Any power tool that cannot be turned ON or OFF is dangerous and should be repaired before operating.

Disconnect the tool from the power source and / or battery before making any adjustments, changing accessories or storing.

These measures reduce the risk of accidentally starting the tool.

Store tools out of the reach of children. Do not allow persons that are not familiar with the tool or its instructions to operate the tool.

Power tools are dangerous in the hands of untrained users.

Service the tool. Check the mobile parts are not misaligned or stuck. There should not be broken parts or other conditions that may affect its operation. Repair any damage before using the tool.

Most accidents are caused due to poor maintenance to the tools.

Keep the cutting accessories sharp and clean.

Cutting accessories in good working conditions are less likely to bind and are easier to control.

Use the tool, components and accessories in accordance with these instructions and the projected way to use it for the type of tool when in adequate working conditions.

Using the tool for applications different from those it was designed for, could result in a hazardous situation.

**Service**

Repair the tool in a TRUPER Authorized Service Center using only identical spare parts.

This will ensure that the safety of the power tool is maintained.

This tool is in compliance with  
the Official Mexican Standard  
(NOM - Norma Oficial Mexicana).

# Safety warnings for electric planers

## Before operating the tool

- Unroll completely the extension cable to prevent potential overheating.
- Double check the power outlet voltage matches the rated voltage described in the tool nameplate.
- ⚠ CAUTION** • Remove from the workplace all the rags, clothes, cables, ropes or any object that could get caught in the tool's blades.
- ⚠ WARNING** • Remove nails, screws or any object from the workpiece. These materials would damage the blades and the tool and represent a risk for your safety.
- ⚠ CAUTION** • Before starting any job, double check the blades fixing screws are perfectly tight.
- Before operating the tool, turn it ON and let it run for a few moments. Check if there are vibrations indicating a poor setting or an unbalanced blade.

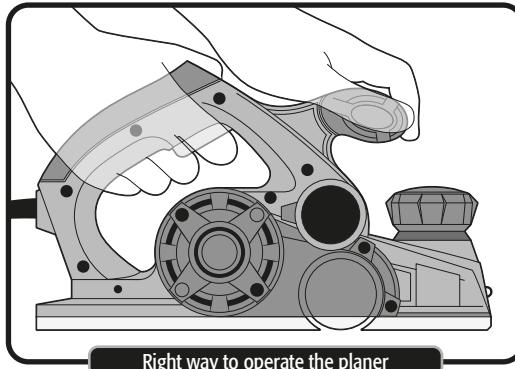

## While operating the tool

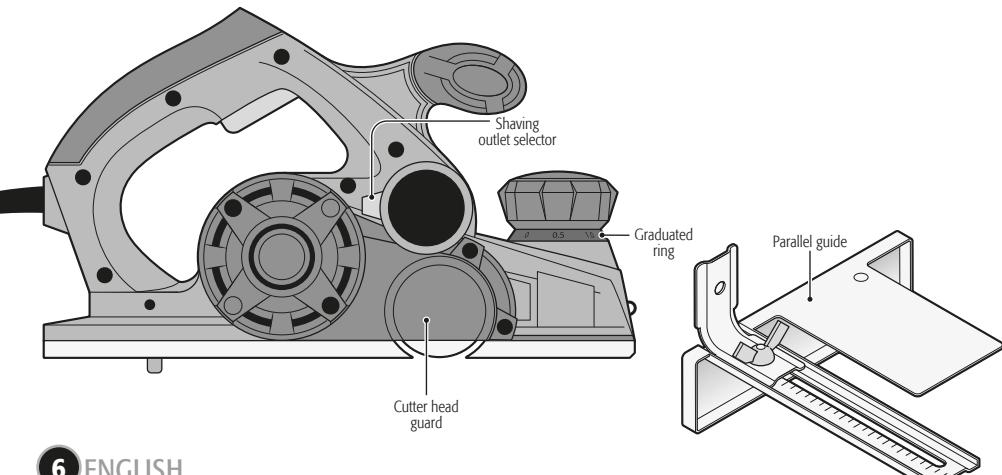

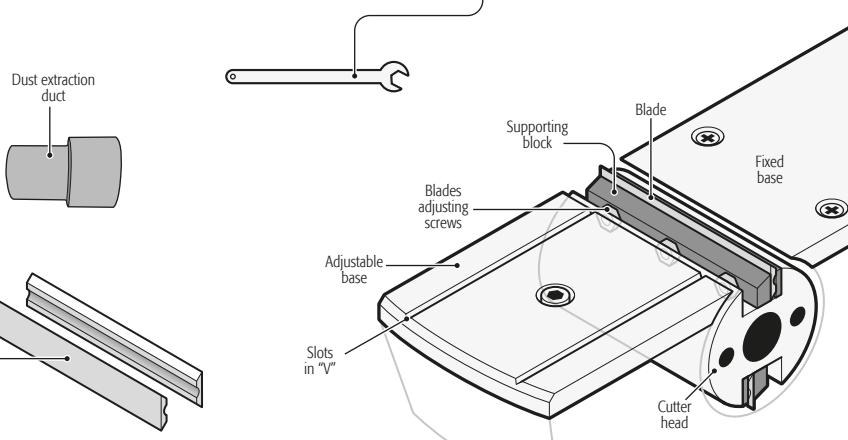

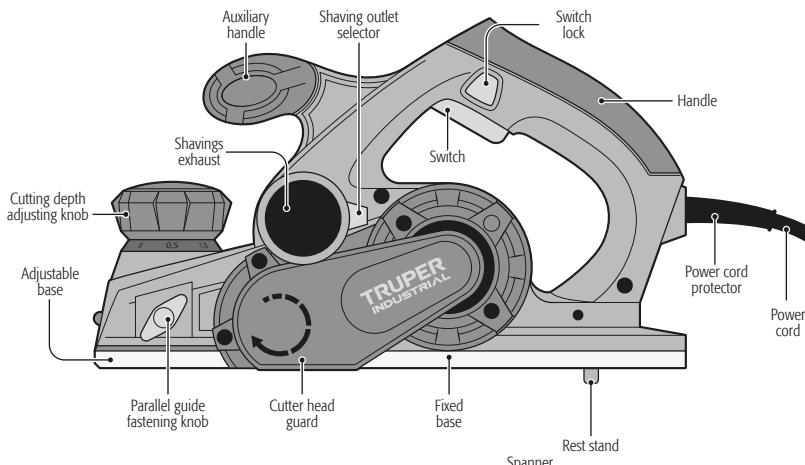

- When possible, use a dust extraction system.
- ⚠ CAUTION** • When operating the tool, hold it only by the handle and the insulated parts. In the event of making contact with a hidden cable in the tool, the exposed metallic parts may pass a discharge to the operator.
- Hold the tool firmly using both hands.
- ⚠ DANGER** • Keep your hands away from the rotating parts.
- ⚠ CAUTION** • Double check the blades are not making contact with the work piece when turning ON the machine.
- Before cutting, wait until the blades reach the maximum speed.
- Work with the machine setting it at least 8" away from your face and body.
- ⚠ CAUTION** • Never leave the tool running with no supervision. Handle the tool only when you can control it with both hands. Turn it OFF before leaving it aside.
- After long periods of functioning, the tool metallic parts may be very hot.

## After operating the tool

- When finishing operating the tool, turn it OFF and leave it with its base upwards, on top of a wood block, so that the blades are not making contact with any type of materials.
- Before trying to carry out adjustments, turn the machine OFF and wait for the blades to stop completely.
- ⚠ DANGER** • Never put your finger into the shavings discharge orifice. To remove excess of shavings, turn OFF and disconnect the tool. Use a stick to remove the shavings.
- When necessary, replace both blades at the same time. Otherwise, the resulting imbalance will cause vibrations and will shorten the useful life of the blades and the tool. Handle blades with extreme caution!

Right way to operate the planer

# Preparation

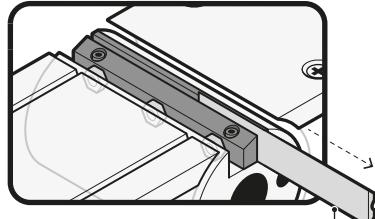

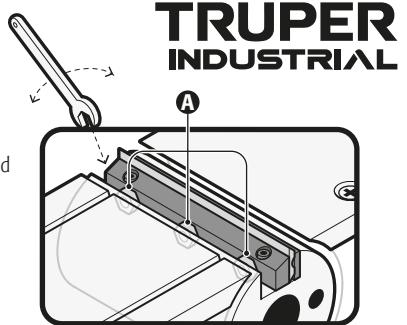

**TRUPER**  
**INDUSTRIAL**

## Blades set up

The blades must be adjusted so that the cutting edge is level with the fixed base. (See "Blade leveling" below).

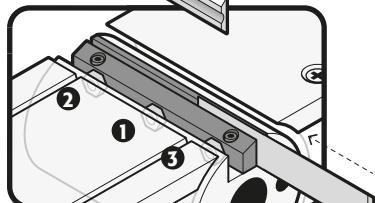

### **ATTENTION**

- Always make sure the tool is turned off and unplugged before making any adjustments to it.
- Firmly and carefully tighten the screws that fix the blades to the tool. A loose screw can be dangerous.
- Handle the blades carefully, wear safety gloves when mounting or removing the blades to protect your hands.
- Use only the included wrench to tighten or loosen the screws. Failure to do so could result in over- or under-tightening and cause accidents.

## Removing the planer blades

- To reverse or replace the planer blades, rotate the cutter head until the support block is parallel to planer base.
- To remove the worn blades, loosen the three bolts that secure the blades in place (A) with the included 8 mm wrench, turning them counter clockwise.
- Slide the worn knife (B) out of the cutter head. You can use a piece of wood to do this.
- The knives are sharpened on both sides. Turn the knife around to reinstall it. If you have already done this then you will need to replace the knife.

## Assembly of the blades

- With the worn blade out, slide the new blade (C) through the block and align the blades to the width of the block.- The blade groove should point towards the fixed base of the tool.- Tighten evenly the three adjustment screws in the tightening order (1 / 2 / 3).- Repeat the operation with the other blade.

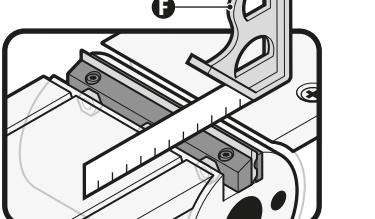

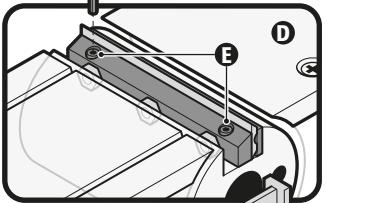

- ### **ATTENTION**
- Before turning the tool on, check that adjustment screws are tighten. Turn the cutting head by hand and make sure the planer blade does not touch any part of the tool.

## Blades leveling

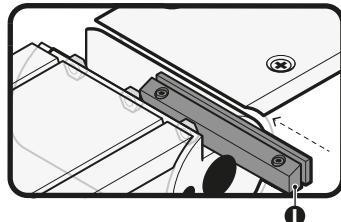

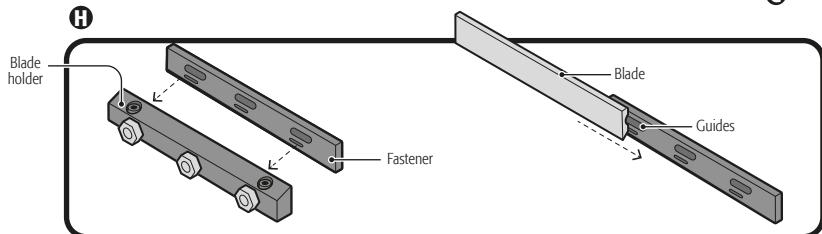

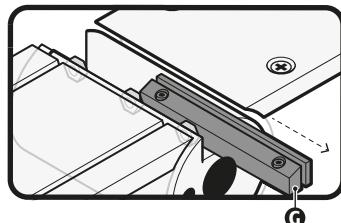

The blades must be adjusted to the height of the base (D), If this is not the case, follow the instructions below:

- Slightly loosen the adjusting screws (A) with the 8 mm wrench.
- Using a 2.5 mm hexagonal wrench, turn the height control screws (E) clockwise to go up, and counterclockwise to go down, as required by the planner.
- Level the height by resting a set square (F) on the fixed base and the adjustable base (set to 0).
- Finally, tighten the adjusting screws with the 8 mm wrench.

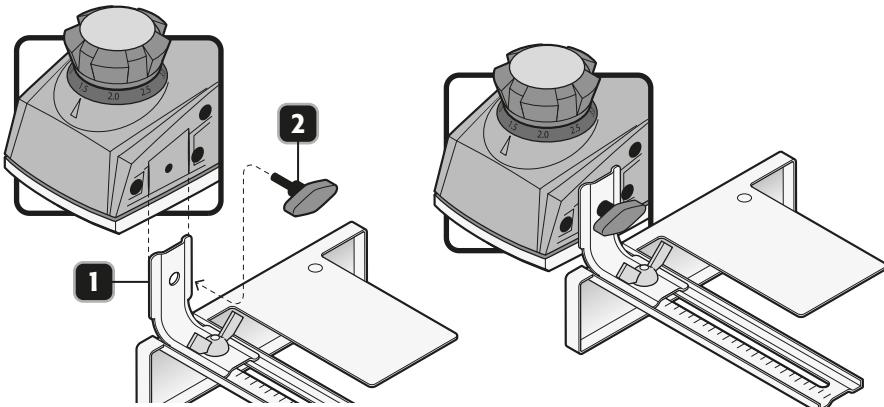

## Replacement of jaws

- 1: The blades must be adjusted so that the cutting edge is level with the fixed base see "Blade leveling".
- 2: Remove the blade holder displacing it to the right (**G**).
- 3: Assemble the fastener to the blade holder to ensure the double pins have a coincidence (**H**).
- 4: Place the blade holder assembly inside the tool (**I**).
- 5: Insert the blade from right to left inside the blade holder, ensuring the blade is smooth in the guides.
- 6: Align the blades following the steps in the "Blade Leveling" section.

## Parallel guide set up

- Install the parallel guide on the opposite side of the depth guide (**1**).
- The parallel guide is secured in place with a clamping knob (**2**).

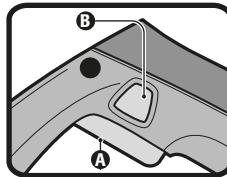

# Start up

**TRUPER**  
**INDUSTRIAL**

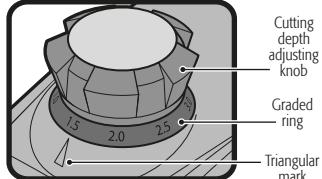

## Start and operation control

- Connect the plug into the power outlet.
- Keep the switch lock (**B**) pressed to unlock the switch (**A**). The switch lock prevents from accidentally starting up the tool.
- Press the switch (**A**) to start the cutter head in motion.
- To stop the cutter head, release the switch (**A**).

## Cutting depth adjustment

- To make the adjustable base reach the desired height, turn the cutting depth-adjusting knob until the measure in millimeters indicated in the knob's graded ring matches the triangular mark.
- To determine precise cutting depths, plan a piece of scrap wood, measure the thickness difference and adjust to the needed value.

## Shavings removal

- Turn the shavings outlet dial so that the arrow points towards the planer side where you want shavings to be expelled.
- You can also connect a workshop dust extracting system or a household vacuum cleaner into the exhaust. This will make a safer and cleaner work place.

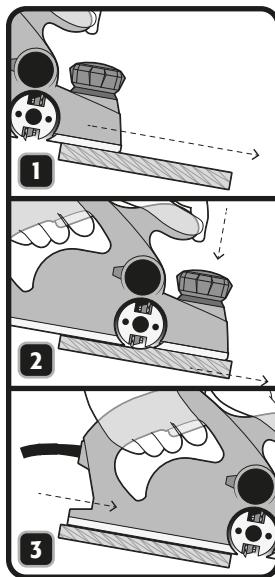

## Planing

- Set the adjustable base onto the work piece surface. The blades should not make contact with the piece (**Figure 1**).
- Start the tool and wait for the blades to reach the maximum speed.
- Holding the tool with both hands, run it smoothly applying pressure in the front on the auxiliary handle (**Figure 2**). The job will be easier if the work piece is slightly tilted to allow a *downwards* planing.
- Push the tool beyond the work piece but not leaning downwards (**Figure 3**).
- The planing speed and cutting depth determine the finish quality. To get a rough cut increase the cutting depth. To get a fine finish diminish the cutting depth and push the tool slower.

**CAUTION** An extremely fast pass of the tool may produce bad quality cuts and will damage the blades or the motor. If the movement is to slow, you may burn or damage the cut.

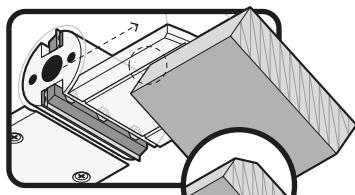

The right advancing speed will be dependent of the type of material being used and the cutting depth. Before planing the work piece, make some tests using a piece of scrap wood to gauge the right speed and the dimensions of the cut.

**WARNING** Secure the work piece using clamps to prevent accidents and defects in the cut.

## Bevel cuts

- For bevel cuts or chamfers, match the work piece edge with one of the two slots in "V" in the adjustable base.
- Make passes with the planner aligning the notch on the edge.

**WARNING** Disconnect the cable from the power outlet before carrying out any adjustment, service or maintenance to the tool.

## Cleaning and care

- Keep the tool dust-free. Never use water or chemical substances to clean the tool. Clean the machine with compressed air after each use.
- Always keep the ventilation slots clean and free of obstructions to guarantee the adequate cooling of the motor.
- Inspect regularly all the mounting screws. Make sure that are tightly fastened. If a screw is loose, tighten immediately.
- The armature and motor are the power tool's heart. Use extreme care not to affect the tool with oil or water.
- In a regular basis, double-check the power cable. Look for any type of damage. If the cable is damaged take it to a TRUPER Authorized Service Center.

## Carbon brush replacement

- Carbon Brushes should be periodically checked and when worn, replaced always in a TRUPER Authorized Service Center.
- After replacing the carbon brushes request to inspect if the new carbon brushes can move freely in the carbon housing. Also request to run the tool 5 minutes to make even the contact with the carbon brushes and the commutator.
- Use only original TRUPER spare carbon brushes specifically designed with the hardness and resistance adequate for each type of motor. Carbons that are out of specification could damage the motor.
- When replacing carbon brushes, always replace both.

## Service

Servicing the tool shall only be carried out in a TRUPER Authorized Service Center. Service and maintenance carried out by non-qualified people may be dangerous and may cause personal injuries. It also makes the Warranty void.

## Replacements

Replacement	Code	Item
Tungsten carbide blades (2 pcs)	13088	CU-CE-4-1/2NX
Switch	101264	INT-CE-N
Parallel guide	101269	GUIA-CE-4-1/2NX

Replacement	Code	Item
Replacement belt	101265	BAN-CE-4-1/2NX
Blade holder set	101268	JGO-CE-4-1/2NX
Carbon brush	13095	CB-CE-4-1/2NX

SERVICO

- Los carbonos deben revisarse periódicamente y ser reemplazados por un Centro de Servicio Autorizado TURF en la ciudad de Hualán si los reemplazos se realizan dentro de los 5000 minutos para empalmar el contacto de los carbonos y el quemador.
  - Solo se deben usar carbonos de repuesto que cumplen con la normativa establecida para cada tipo de motor. Los carbonos fuera de especificaciones de motor deben darse al motor.
  - Cuando se haga el cambio de carbonos siempre debe haber carbón de los dos tipos.

#### Clamditò de Cardoñes

- La guía paralela se fija en su lugar con una perilla de sujeción (2).
- Coloque la guía paralela del lado opuesto a la guía de profundidad (1).

#### Instalación de la guía paralela

- 4: Alinee las cuchillas siguiendo los pasos del apartado de "Nivelación de cuchillas".

- 5: Ensamble la cuchilla siguiendo los pasos del apartado de este ítem.

- 3: Ensamble el portacuchillas deslizándolo a través del rodillo (G).

- 2: Retire el portacuchillas deslizándolo en el rodillo (G).

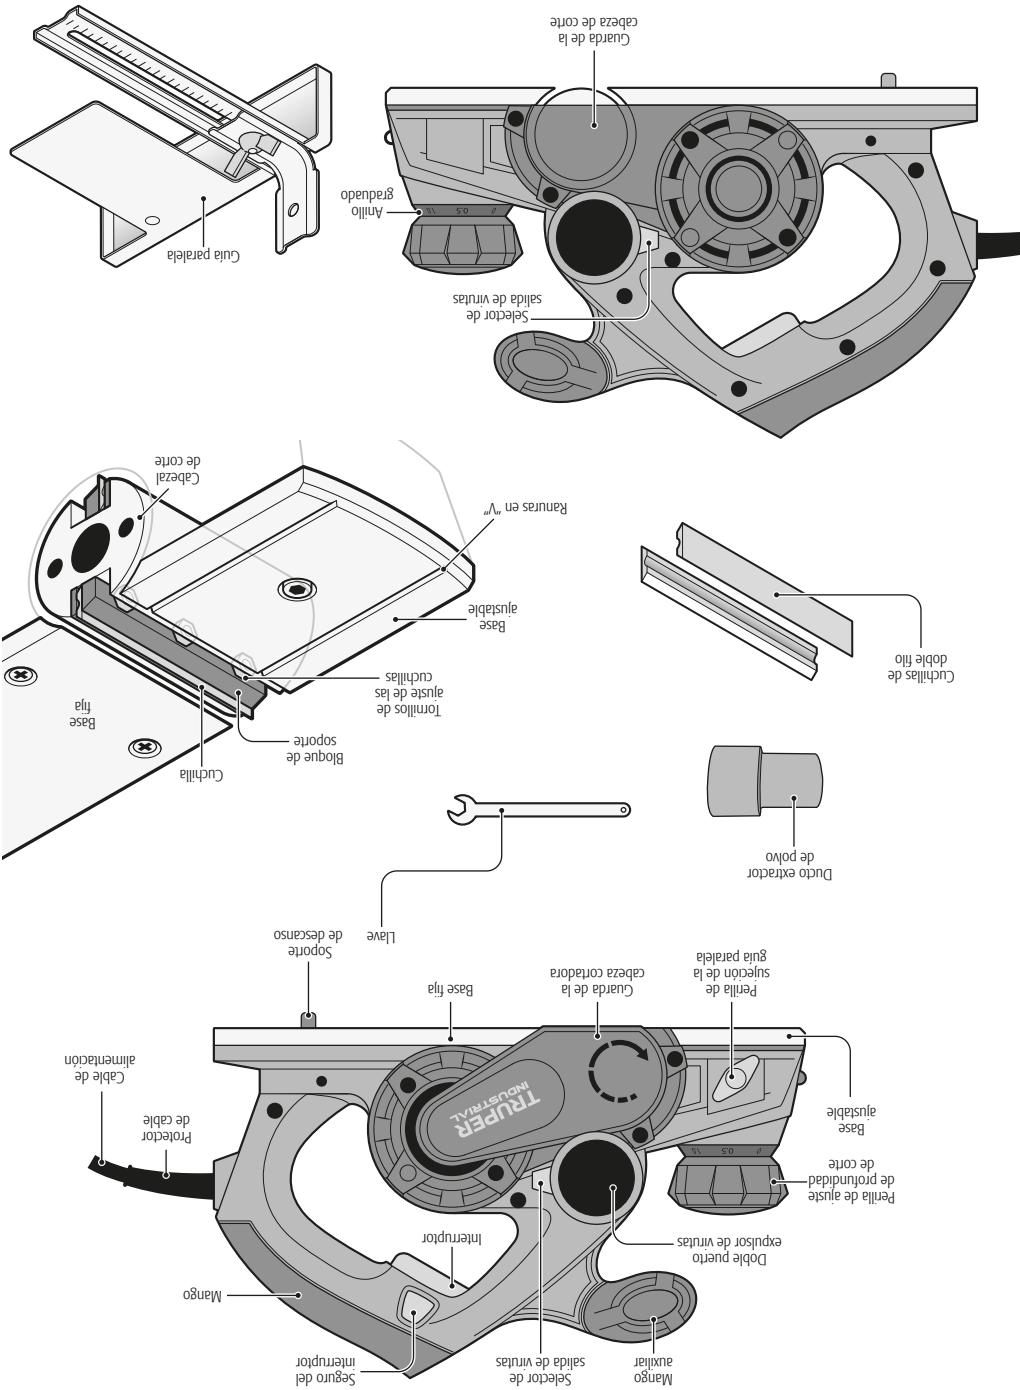

- 1: Desmonte las cuchillas siguiendo las instrucciones del apartado de "Desmontaje de cuchillas".

#### Remplazo de mordazas

## Preparación

## **Partes**

INDUSTRIAL  
TRUPEER

**Forma adecuada de operar el cepillo**

vibraciones y acortarla la vida útil de las cuchillas y de la herramienta. Maneje las cuchillas con mucho cuidado.

- Cuando sea necesario cambie las dos cuchillas al mismo tiempo. De lo contrario, el desequilibrio resultante causaría herramienta, utilice un palo para quitar las vibras.
- Antes de intentar cualquier ajuste, apague la herramienta y espere a que las cuchillas se detengan por completo.
- Cuando termine de operar la herramienta, apague ya déjela con la base hacia arriba sobre un bloque de madera, de modo que las cuchillas no estén en contacto con nada.

**Después de operar la herramienta**

lasy partes metálicas pueden estar muy calientes.

- Despues de periodos prolongados de funcionamiento, ambas manos apáguelas antes de soltarla.

**! ATENCIÓN** • Nunca deje la herramienta prendida distancia de su torso y cuerpo.

- Maneje la herramienta por lo menos a 20 cm (8") de máxima velocidad.

• Antes de cortar, espere a que las cuchillas alcancen su máxima velocidad.

• Estén en contacto con la pieza de trabajo al encender la máquina.

**! ATENCIÓN** • Asegúrese de que las cuchillas no giratorias.

- Siempre la herramienta firmemente, con las dos manos.

**! ATENCIÓN** • Al operar la herramienta sostenéala expuestas de la herramienta podrán dar una descarga eléctrica.

**! ATENCIÓN** • Al operar la herramienta sostenéala solamente por el mango y sus partes lisas. En caso de hacer contacto con un cable oculto las partes metálicas harán que la electricidad fluya a través de su cuerpo.

**! ATENCIÓN** • Siempre que sea posible, use un sistema de extracción de polvo.

**Antes de operar la herramienta**

**Milentrás opera la herramienta**

• Desenrolle por completo el cable de extensión para evitar un sobrecalentamiento potencial.

• Asegúrese de que la extensión nominal descrita en la placa de su herramienta.

• Asegúrese de que la tensión del tomacorriente sea igual a la tensión nominal descrita en la placa de su herramienta.

**Advertencias de seguridad**

**para uso de cepillos eléctricos**

**Antes de operar la herramienta**

para el uso en exteriores y reducen el riesgo de sufrir una descarga eléctrica.

**A ADVERTENCIA** Al operar herramientas eléctricas en exteriores, utilice una extensión

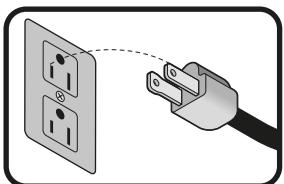

\* Se permite utilizarlo siempre y cuando las extensiones mismas queden con un arrelado de proteccion contra sobrecorriente.

Lapaciadad en	Número de	Calidre de extensión	conductores	amperes	máyore de 15 m	mayor de 15 m
de 0 hasta 10 A	16 AWG(*)	18 AWG(*)	3 (uno a tierra)	16 AWG	14 AWG	12 AWG
de 10 A hasta 13 A	16 AWG	16 AWG		16 AWG	14 AWG	12 AWG
de 13 A hasta 15 A	16 AWG	16 AWG		16 AWG	14 AWG	12 AWG
de 15 A hasta 20 A	8 AWG	8 AWG		8 AWG	6 AWG	6 AWG

duelas use el soplete calibre mas alto.

**ADVERTENCIA:** Un usuario no calificado de extensión, desearía usar el software para transportar la comisión que contiene suministros su herramienta. Un cable de un calibre inferior o ocasionalmente cables de tensión en la línea, encendido como resultado de la negligencia del usuario, dañaría la herramienta. Si tiene

**A NOTIFICAR** **Electrificada con conexión a tierra.**

## Redes de suministro eléctricos

**ADVERTENCIA** Antes de obtener acceso a las terminales, todos los circuitos de alimentación deben ser desenchufados.

**ADVERTENCIA** Si el cable de alimentación se daña, éste debe ser reemplazado por el fabricante o Centro de Servicio

La clase de alisamiento térmico de los devanados del motor: Clase A  
La clase de construcción térmica de la remache es: Aluminio reforzado.
