Warranty policy	12

CAUTION

To gain the best performance of the tool, prolong the duty life, make the Warranty valid if necessary, and to avoid hazards of fatal injuries please read and understand this Manual before using the tool.

Keep this manual for future references.

The illustrations in this manual are for reference only. They might be different from the real tool.

TAL-3/8N2

Code	•	16706
Description	•	Drill
Chuck	•	3/8"
Voltage	•	127 V~
Frequency	•	60 Hz
Current	•	3.15 A
Power	•	0.6 Hp
Speed	•	0 RPM - 3 000 RPM
Drilling Capacity	•	Metal: 3/8" Wood: 3/4"
Duty cycle	•	50 minutes work per 20 minutes idle. Maximum 6 hours per day.
Conductors	•	18 AWG x 2C with insulating temperature of 221 °F
Insulation	•	Class II
		IP Grade • IP20

Power Cord Grips used in this product: Type "Y".

Tool Build Quality: Reinforced insulation

Thermal insulation on motor winding: Class E.

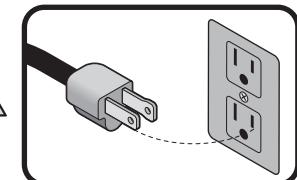

WARNING Avoid the risk of electric shock or severe injury. When the power cable gets damaged it should only be replaced by the manufacturer or at a  TRUPER® Authorized Service Center. The build quality of the electric insulation is altered if spills or liquid gets into the tool while in use. Do not expose to rain, liquids and/or dampness.

WARNING Before gaining access to the terminals all power sources should be disconnected.

Power requirements

WARNING Double insulated and reinforced insulation tools are equipped with a polarized plug (one blade is wider than the other). This plug will fit into any polarized plug and will only fit one way. If the plug does not fit in the socket, flip it over. If it still does not fit, contact a qualified electrician or install a polarized plug. Do not alter the plug in any way. Both types of insulation eliminate the need for a grounded, three-part power cord or grounded power system.

WARNING When using an extension cable, verify the gauge is enough for the power that your product needs. A lower gauge cable will cause voltage drop in the line, resulting in power loss and overheating. The following table shows the right size to use depending on cable's length and the ampere capability shown in the tool's nameplate. When in doubt use the next higher gauge.

Ampere Capacity	Number of Conductors	Extension gauge from 5.9' to 49.2'	higher than 49.2'
from 0 A and up to 10 A		18 AWG(*)	16 AWG
from 10 A and up to 13 A		16 AWG	14 AWG
from 13 A and up to 15 A		14 AWG	12 AWG
from 15 A and up to 20 A	3 (one grounded)	8 AWG	6 AWG

* It is safe to use only if the extensions have a built-in artifact for over current protection.

AWG = American Wire Gauge. Reference: NMX-J-195-ANCE

WARNING When operating power tools outdoors, use a  VOLTECK® grounded extension cable labeled "For Outdoors Use". These extensions are especially designed for operating outdoors and reduce the risk of electric shock.

**General power tool
safety warnings**

⚠ WARNING! Read carefully all safety warnings and instructions listed below. Failure to comply with any of these warnings may result in electric shock, fire and / or severe damage. **Save all warnings and instructions for future references.**

Work area

Keep your work area clean, and well lit.

Cluttered and dark areas may cause accidents.

Never use the tool in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.

Sparks generated by power tools may ignite the flammable material.

Keep children and bystanders at a safe distance while operating the tool.

Distractions may cause loss of control.

**Electrical Safety**

The tool plug must match the power outlet. Never modify the plug in any way. Do not use any adapter plugs with grounded power tools.

Modified plugs and different power outlets increase the risk of electric shock.

Avoid body contact with grounded surfaces, such as pipes, radiators, electric ranges and refrigerators.

The risk of electric shock increases if your body is grounded.

Do not expose the tool to rain or wet conditions.

Water entering into the tool increases the risk of electric shock.

Do not force the cord. Never use the cord to carry, lift or unplug the tool. Keep the cord away from heat, oil, sharp edges or moving parts.

Damaged or entangled cords increase the risk of electric shock.

When operating a tool outdoors, use an extension cord suitable for outdoor use.

Using an adequate outdoor extension cord reduces the risk of electric shock.

If operating the tool in a damp location cannot be avoided, use a ground fault circuit interrupter (GFCI) protected supply.

Using a GFCI reduces the risk of electric shock.

Personal safety

Stay alert, watch what you are doing and use common sense when operating a tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.

A moment of distraction while operating the tool may result in personal injury.

Use personal protective equipment. Always wear eye protection.

Protective equipment such as safety glasses, anti-dust mask, non-skid shoes, hard hats and hearing protection used in the right conditions significantly reduce personal injury.

Prevent unintentional starting up. Ensure the switch is in the "OFF" position before connecting into the power source and / or battery as well as when carrying the tool.

Transporting power tools with the finger on the switch or connecting power tools with the switch in the "ON" position may cause accidents.

Remove any wrench or vice before turning the power tool on.

Wrenches or vices left attached to rotating parts of the tool may result in personal injury.

Do not overreach. Keep proper footing and balance at all times.

This enables a better control on the tool during unexpected situations.

Dress properly. Do not wear loose clothing or jewelry. Keep hair, clothes and gloves away from the moving parts.

Loose clothes or long hair may get caught in moving parts.

If you have dust extraction and recollection devices connected onto the tool, inspect their connections and use them correctly.

Using these devices reduce dust-related risks.

Power Tools Use and Care

Do not force the tool. Use the adequate tool for your application.

The correct tool delivers a better and safer job at the rate for which it was designed.

Do not use the tool if the switch is not working properly.

Any power tool that cannot be turned ON or OFF is dangerous and should be repaired before operating.

Disconnect the tool from the power source and / or battery before making any adjustments, changing accessories or storing.

These measures reduce the risk of accidentally starting the tool.

Store tools out of the reach of children. Do not allow persons that are not familiar with the tool or its instructions to operate the tool.

Power tools are dangerous in the hands of untrained users.

Service the tool. Check the mobile parts are not misaligned or stuck. There should not be broken parts or other conditions that may affect its operation. Repair any damage before using the tool.

Most accidents are caused due to poor maintenance to the tools.

Keep the cutting accessories sharp and clean.

Cutting accessories in good working conditions are less likely to bind and are easier to control.

Use the tool, components and accessories in accordance with these instructions and the projected way to use it for the type of tool when in adequate working conditions.

Using the tool for applications different from those it was designed for, could result in a hazardous situation.

Service

Repair the tool in a TRUPER® Authorized Service Center using only identical spare parts.

This will ensure that the safety of the power tool is maintained.

This tool is in compliance with
the Official Mexican Standard
(NOM - Norma Oficial Mexicana).

Safety standards for drills

TRUPER
INDUSTRIAL

Choose the right bit

- CAUTION** • Choose the right bit for the work piece. It reduces the risk of severe injury and makes the job easier.
- To work on metal or plastic, use bits suitable for metal. Sizes encompass a minimum of 0.05" and up to the chuck maximum capacity (0.37").
 - On wood, use regular bits suitable for wood. In any case, to drill 0.256" or smaller orifices, use bits designed to drill on metal.
 - Do not try using bits exceeding the chuck capacity.

Before using the drill

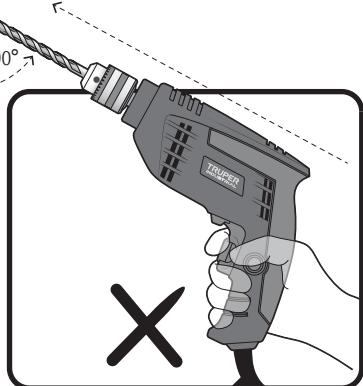

- Before starting to work with the drill, take a few minutes to assess the job to be done and double-check all the safety caution rules.

- WARNING** • Fit the bit into the chuck. Remove the chuck wrench before drilling. Failure to follow this instruction shoots out the chuck wrench with great speed and cause severe injury.

- DANGER** • Before drilling walls, floors or ceiling, look for any built-in objects, like power cables and conductors or pipes.

- DANGER** • Verify the switch is in the OFF position before connecting the drill. Otherwise, it can unexpectedly start operating and could cause sever injuries.

- CAUTION** • Turn off and disconnect the tool before reversing the chuck's direction as well as fitting or replacing bits.

Wrong way to operate the drill.

While operating the drill

- Use the auxiliary handles, if supplied with the tool. Loss of control may result in personal injury.
- Hold the tool by the isolated parts. The cutting part of bit could come into contact with hidden wiring or with its own power cord. Making contact with a power cord causes the tool metal parts get electrified and may result in electric shock to the user.
- Do not force the tool to excessive workloads.

- CAUTION** • Turn off the drill immediately if the bit gets stuck into de work piece. Then, remove the bit off the work piece. Do not try removing stuck bits turning on and off the tool.

- Do not apply too much force on the tool in order to accelerate the drilling procedure. The bit could get damaged and the tool would loose efficiency and useful life.

- WARNING** • A large diameter bit causes a higher reactive force leading to losing control over the tool. To avoid this possibility, firmly hold the tool with both hands and keep balanced footing. Drill at 90°

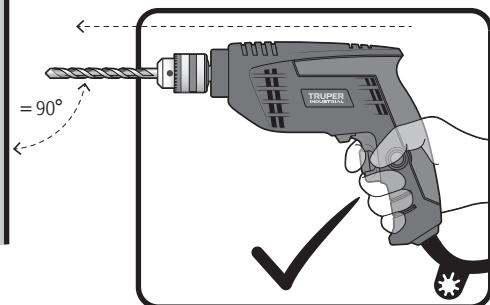

- Be prepared to relax the drilling force when the bit goes through the material. Sudden movements could break the bit or damage the drill.

- CAUTION** • Do not touch the bit or the orifices immediately after drilling. Wait until they cool down to handle them. Do not try to cool them down using water or oil.

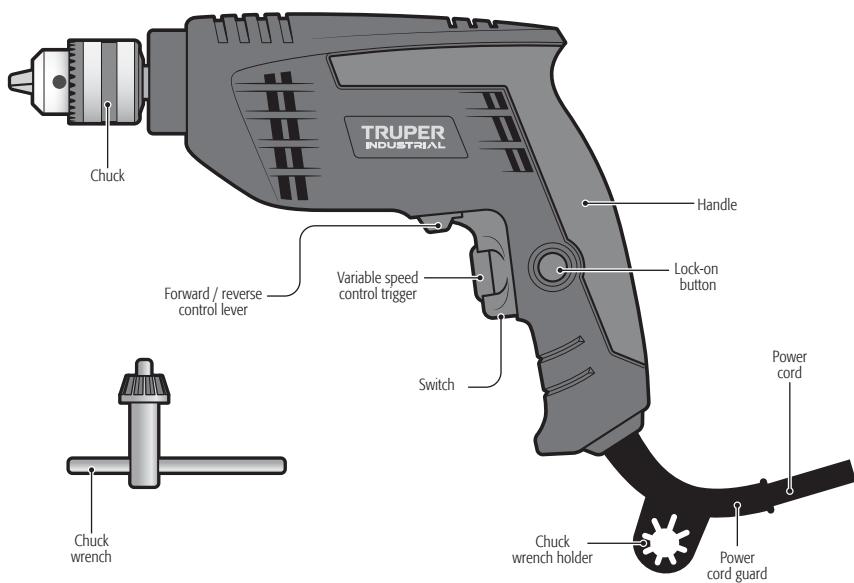

- Immediately after using do not set the tool where there are particles and / or dust. They can be absorbed into the tool mechanism and cause damage.

- Use earplugs when using the drill. Exposure to noise can cause hearing loss.
- Use dust mask and dust extractor if necessary. Remember that materials such as asbestos, paint with lead, additives, some types of wood, metals or minerals are highly toxic.

- Use safety glasses.

Right way to operate the drill.

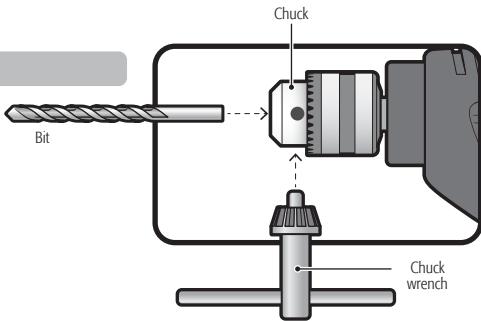

Preparation

TRUPER®
INDUSTRIAL

Bit fitting

- Put the bit into the chuck until it stops. Fasten with the chuck wrench and tighten alternatively the chuck into each of the orifices.

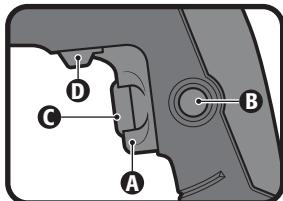

WARNING Clean burrs and any other foreign objects from the drill bit and drill bit, otherwise the drill bit may not be tight and cause serious personal injury.

Start up

Start up and operation control

- Intermittent operation:
Connect the plug into the power outlet.
Press the switch (A) to start the drill.
To stop, just release the switch.
- Continuous operation:
Connect the plug into the power outlet.
Press the switch (A) and block it pressing the lock-on button (B).
To stop, press and then, release the switch.

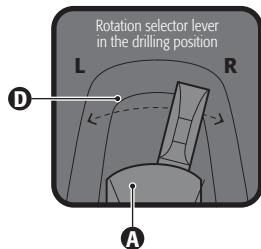

Speed control

- The tool can operate in different speeds. These can be selected adjusting the speed control (C). Turn the speed control in a clockwise direction to increase the Drill speed. Turn in a counterclockwise direction to decrease speed.

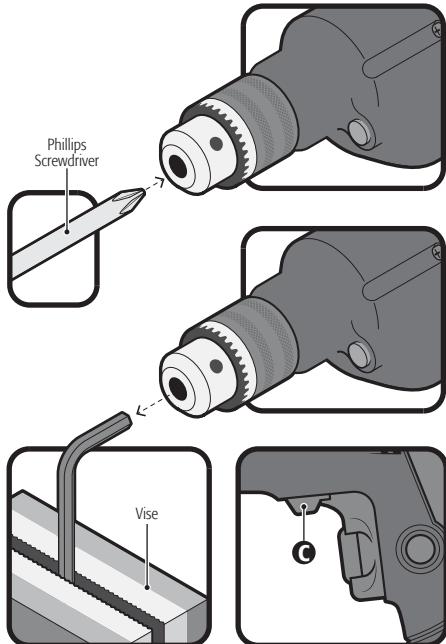

Rotation direction

- The direction of rotation of the drill is controlled by the rotation selector lever (D). With this function you can use the tool as a screwdriver.
- In order for the bit to rotate forward and drill, move the rotation selector lever (D) to the right side of the trigger (letter R).
- To rotate the tool in reverse and use it as a screwdriver, move the rotation selector lever (D) to the left side of the trigger (letter L).

Chuck Change

- Remove the auxiliary handle and open wide the chuck jaws.
- Using a screwdriver remove the left-threaded safety screw with a clockwise movement.
- Fit the long side of an "L" (not included) Allen key in a vise and insert the short side of the "L" (not included) Allen key to the chuck. Close the jaws.
- Move the rotation selector lever (**C**) into the reverse position (page 7 Rotation Direction) and activate the drill holding it firmly. The chuck will be released with the turn.
- Set the new chuck turning it into the drill thread until it stops.

Cleaning and care

- Keep the vent slots clean and without obstructions to guarantee adequate motor cooling.
- Inspect every now and then all the mounting screws and verify they are correctly fastened. If a screw is loose tighten immediately.

Service

- Service for the tools shall only be carried out in a **TRUPER®** Authorized Service Center.
- Service and maintenance carried out by non-qualified people may be dangerous and could cause personal injury. It also makes the Warranty void.

Lubrication

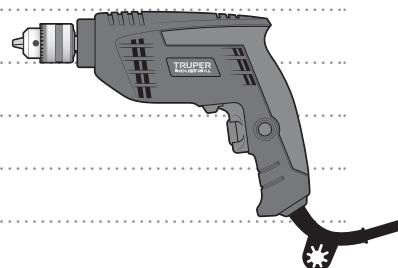

- We recommend taking the tool to a **TRUPER®** Authorized Service Center to lubricate the drive wheel every time replacing carbon brushes is needed.

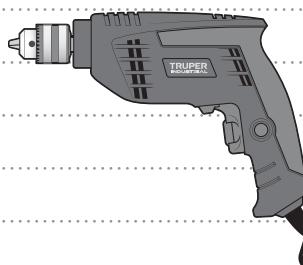

Carbon brush replacement

- Carbons should be checked periodically. When worn take the tool to a **TRUPER®** Authorized Service center to have them replaced.
- After replacement ask to see if the new carbons can move freely inside the carbon housing and to run the motor 5 minutes to even contact between carbons and commutator.
- Use only original **TRUPER®** spare carbons specifically designed with the hardness and resistance adequate for each type of motor. Carbons that are out of specification could damage the motor.
- Both carbons should be changed simultaneously.

Mantenimiento

- Los carbonos deben revisarse periódicamente. En caso de que uno o más carbonos cambien de posición, se acuda a un Centro de Servicio Autorizado  TRUPER.
- Una vez reemplazados, pida que se inspeccione si los nevos carbonos pueden moverse libremente en el porta-carbono y solicite que enciendan la herramienta durante 5 minutos para empalmar el contacto de los carbonos y el comunilador.
- Solo se debe usar carbonos de repuesto que se adapten al motor. Los carbonos hechos de especificaciones diferentes de los que se usan en el motor, podrían dañar el motor.
- Cuando se haga el cambio de carbonos siempre debe ser con el motor apagado y la herramienta desacoplada para cada uno de los carbonos.
- Cambiar los carbonos es una tarea que debe ser realizada por un profesional.

Cambio de carbones

- Se recomienda que la transmisión de la herramienta sea lubrificada cada cambio de carbones en un Centro de Servicio Autorizado CTRUPER.

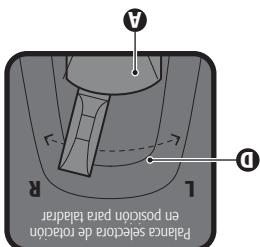

Lubricación

SERVICIO

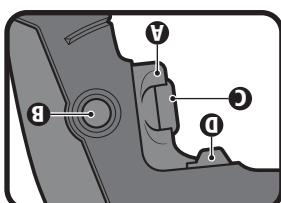

- Siempre mantenga las ventanas limpias y libres de obstrucciones para garantizar un entramado adecuado del motor.
 - Limpie regularmente todos los tornillos de montaje y asegúrese de que estén apretados correctamente. En caso de que alguno de los tornillos esté suelto, apriételo inmediatamente.

Limpieza y cuidados

- La palanca seleccora de rotacion (D) hace a el lado izquierdo del gatillo (Letra L).
- Para que gire en reversa y pueda utilizar la herramienta como destornillador, muvea de rotacion (D).
- Para que la broca gire hacia adelante y pueda taladrar, muvea la palanca seleccora de rotacion (D). Con esta funci'on podra utilizar su herramienta como destornillador.
- La direcci'on de rotacion del taladro se controla a traves de la palanca de direcci'on.

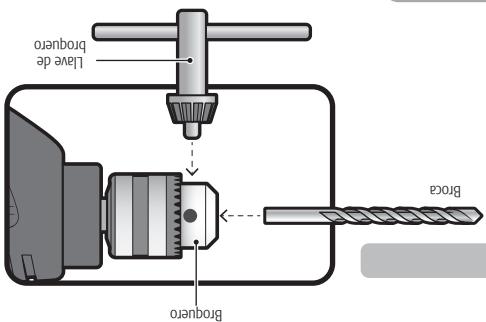

Direcci'on de rotacion

- Para interrumpir su funcionamiento, presione y despus suelte el interruptor.
- Presione el interruptor (A) y bloquelo, apretando el boton de uso continuo (B).
- Conecte la clavija al tomacorriente.
- Operacion continua: Para interrumpir su uso, simplemente suelte el interruptor.
- Presione el interruptor (A). Para hacer que el taladro empiece a funcionar.
- Conecte la clavija al tomacorriente.
- Operacion intermitente: Presione el interruptor (A) y suelte el interruptor (B).

Encendido y control de operacion

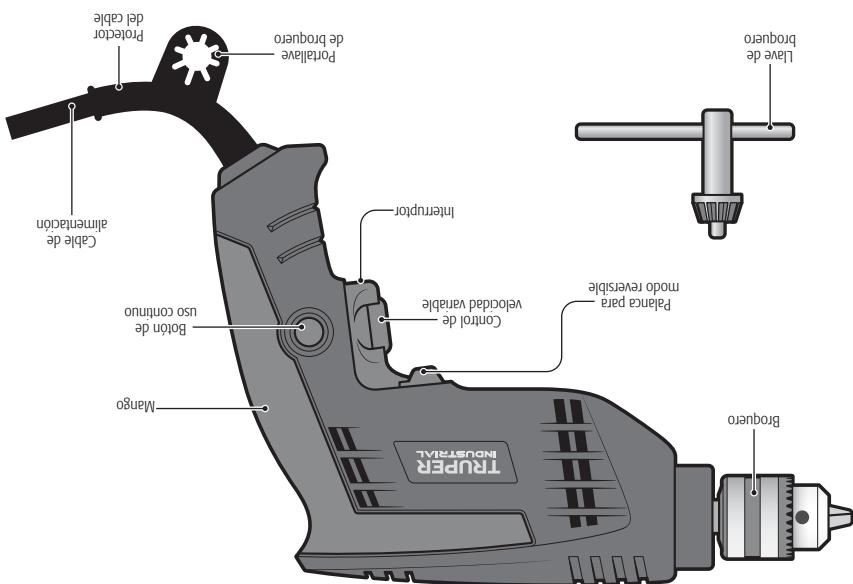

Puesta en marcha

- A ADVERTENCIA:** Limpie las rebabas y quitar el topo y segurite con la llave de broque que lo otro objeto excepto de la broca y de broque, de lo contrario la broca y de broque se prenda y causar lesiones personales serias.
- Introduzca la broca dentro del broque hasta que broque en cada uno de los orificios allanados.

-------------------	-----------	------------------	--------	--------	--------	--------	-------	-------	--------------------

Capacidad en	Número de	Conductores	Calibre de extensión	Amperes
			de 1,8 a 15 m mayor de 15 m	

dependerá de la longitud del cable y de la capacidad de amperes indicada en la placa de datos de la herramienta. Si tiene pudiendo de potencia y sobrecalentamiento del motor. La siguiente tabla muestra el tamaño correcto de cable deseado para consumir la herramienta. Un cable de un calibre inferior ocasionaría cables de tensión en la línea, teniendo como resultado la eliminación de la herramienta. Una selección de cable suficiente para transportar la corriente que

se necesita a tierra.

ADVERTENCIA Al usar un cable de extensión, asegúrese de usar el calibre suficiente para transportar la corriente que

Reducir riesgos eléctricos

ADVERTENCIA Antes de obtener acceso a las terminales, todos los circuitos de alimentación deben ser desconectados.

La base de alimentación térmica de los devanados del motor. Clase E

La clase de construcción del aislamiento eléctrico de esta herramienta es: Aislamiento reforzado.

18 AWG x 2C con temperatura de 105 °C

La clase de construcción térmica de los devanados del motor. Clase II

Ciclo de trabajo • Aislamiento • IP20

50 minutos de trabajo por 20 minutos de descanso. Máximo 6 horas diarias.

Metal 3/8" (9.5 mm) | Madeira 3/4" (19 mm)

Velocidad • Potencia • Corriente
